HPV Vaccine Facts

A study published July 2017 in the Journal *Clinical Rheumatology* found that severe harm is suffered every 140 injections of the Gardasil 9 HPV vaccine.

The United States is the only country in the world where pharmaceutical companies are not legally liable for defective vaccine products; therefore the only thing potentially stopping them from flooding the market with more vaccine products is negative vaccine information.

With the pharmaceutical industry being one of the largest purchasers of corporate media advertisement, negative vaccine information is routinely suppressed in the corporate “mainstream” media.

As of April 2018, the Vaccine Adverse Event Reporting System (VAERS)* has received **419 reports of death following HPV vaccination**, as well as:

- **2,634 reports of disability**
- **8,343 serious adverse events**
- **1,703 life-threatening adverse events**
- **15,278 emergency room visits**
- **6,139 hospitalizations**

*Note: VAERS is a voluntary reporting system with typically only 1% of injuries being reported. The real injury/death figures could be 100x greater than those shown above.

A few HPV Vaccine Ingredients You Should Know About:

- ❖ **Polysorbate 80**: Crosses the blood brain barrier (BBB), thus allowing toxins into the brain which would otherwise not reach the brain.
- ❖ **Insect cells**

For decades, vaccine companies have been using foreskin cells to research, grow & develop vaccines. **The child’s DNA whose foreskin was used to make the vaccine cannot be fully removed from the vaccines prior to administration.**

- ✚ ***HPV vaccine contains harmful ingredients & has a history of severe negative outcomes including death.***
- ✚ ***People are charged to have their child circumcised yet the hospital can turn another profit by selling the foreskin to pharmaceutical companies.***
- ✚ ***There are hundreds of strains of HPV & the vaccine only deals with less than 10.***
