Ingredients in the different brands of Influenza Vaccines defined for you:

What the package insert says:	What it is in real speak:
Sf9 cells of the fall armyworm	<i>Derived from ovarian tissue of the fall armyworm</i>
Spodoptera frugiperda cell proteins	<i>Related to moths, caterpillars and butterflies</i>
Madin Darby Canine Kidney (MDCK) cell protein, MDCK cell DNA	<i>Cells from dog kidneys</i>
Propagated in the allantoic cavity of embryonated hens' eggs	<i>The virus is injected into fertilized hen eggs, grown then harvested & put in the vaccine</i>
Formaldehyde treatment	<i>Classified as a toxin & carcinogen –banned from injectables in European countries</i>
Sucrose density gradient solution containing detergent to disrupt the viruses	<i>Sucrose is sugar – causes cells to grow faster (this includes cancer cells in your body)</i>
Polysorbate 80 (Tween 80)	<i>Known to cause cancer in animals & linked to numerous autoimmune issues & infertility</i>

In clinical trials with FLULAVAL QUADRIVALENT in adults, the most common solicited local adverse reaction was pain & the most common solicited systemic adverse reactions were muscle aches, headache, fatigue, and joint pain.

Do those 'reactions' sound suspiciously like the Flu?

Even when the flu shot doesn't match the actual flu strain for a given year, it is not pulled from the market due to the large financial loss that would occur to drug companies.

YOU need to be YOUR advocate ... educate yourself.
