Coronavirus Death Rate in the U.S.

According to the CDC, the estimated death rate for the Flu every year is 1 out of 1000 people (or 0.1%)

<https://www.health.com/condition/cold-flu-sinus/how-many-people-die-of-the-flu-every-year>

On July 10, 2020, the CDC announced the Coronavirus death rate of 1 out of 154 people (or 0.65%)

<https://www.cdc.gov/coronavirus/2019-ncov/hcp/planning-scenarios.html>

On July 22, 2020, the CDC announced they believe the actual number of confirmed Coronavirus cases will be 15 times higher than expected, thereby making the actual death rate 1 in 2300 OR less than half of the seasonal flu

<https://www.statnews.com/2020/07/21/cdc-study-actual-covid-19-cases/>

Our professional opinion is that the actual death rate will be much less than the above and fall between 1 in 6,000 to 1 in 10,000

Have you noticed the media has now focused more on the number of cases vs. the number of deaths? It's not an accident.
