# *Scans & Adjustments*

Dr. Anderson explained on the initial visits the purpose of the scan & leg check was to determine **IF** a subluxation was present. Adjustments are **only** administered when those tests indicated & it doesn't have anything to do with how great or poor you feel. **Right?**

It's possible by now or in the near future, after getting scanned visit after visit & you are feeling pretty good to ask yourself... "Why do I need to come in regularly if I'm holding my adjustment & feel good?"

***Glad you asked!***

Dr. Anderson will ask very specific questions when your scans that have been consistent & then demonstrate movement away from a straight line. He's not psychic – those previous scans told one story & now the rough one told a very different one ... maybe there was a trauma, a product or drug was consumed that affected the scan, a stressful day, or maybe you went to Six Flags & got rocked by a rollercoaster. ***The scan shows it all, remember it's unbiased & objective.***

If you think you drove out here, rested 20 minutes, enjoyed a nice chat with us but "nothing happened" because you weren't adjusted, that is far from accurate. Are you bummed if you go to the dentist & you don't have a cavity & you just got a cleaning? Doubtful!

Scanning based on the care plan schedule Dr. Anderson created from the initial exam & x-ray findings is vital to ensure that if & when a subluxation is present, an adjustment can be administered ASAP to avoid regressing back into poor health. **Each & every scan tells a story of what's going on with your Central Nervous System.**

**Corrective Upper Cervical adjustments restore normal spinal position and alignment over time.**
